PNS

PRE-ENGINEERED NETWORK SYSTEM

●●➤

Assembly Instruction Sheet

Model PNS-10, and PNS-100

1. Install 4 "Wings" on to outside of panel. These set the proper depth of the PNS panel in a 2 x 4 wall (PNS-100) or a 2 x6 wall (PNS-10)
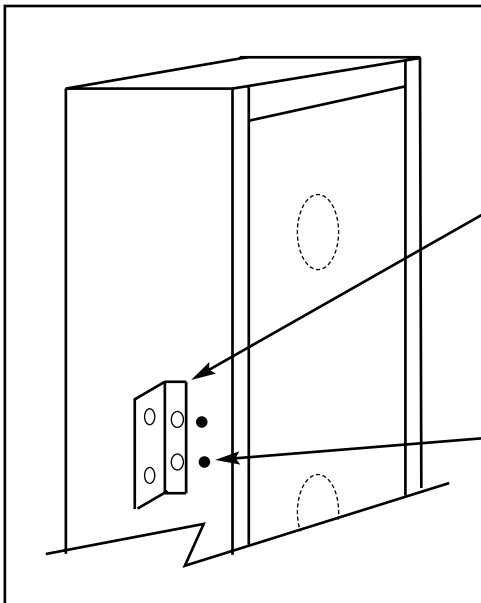

Note that the "short" side of the "wing" faces the front of the PNS panel. This sets the proper depth of the panel in the wall.

FOR PNS-JR ONLY: The holes closer to the back are for use in 2x4 walls. The holes closer to the front can be used in 2x6 walls. In 2x6 walls, this will result in less reveal.

2. Knock out appropriate KO's and install grommets

3. Mount PNS panel in wall (temporarily) and mark location of holes to be drilled for wire and for AC power.

4. Drill holes and permanently install PNS panel using drywall screws.

See "INSTALLER TECH MANUAL" Section 2 for suggestions on wire organization for PNS panel.
